Github Profile: https://github.com/introverthacker11

PROFESSIONAL SUMMARY

Final-semester BSAI student with a comprehensive technical foundation across all primary AI domains, including Machine Learning, NLP, and Computer Vision. Proven track-record in developing end-to-end AI solutions and bridging complex theoretical concepts with practical, scalable implementation. Passionate about leveraging a versatile toolkit to solve high-impact, real-world challenges within a dynamic engineering environment.

WORK EXPERIENCE

NASA Space App Challenge 2025

- **Project selected in top 1900 out of 18500+ international projects**

- Large Language Models **(LLMs)** for intelligent insights and explanation of weather predictions.

- NASA POWER API to fetch real-time and historical global meteorological data.

- Streamlit to build an interactive web interface for the weather prediction system.

- TensorFlow / Keras for training and deploying the machine learning prediction model.

Data Visualization Intern – TATA Group – Virtual

- Engineered data cleaning and transformation pipelines to handle complex, multi-source business datasets.
- Architected interactive dashboards using Power BI/Tableau to visualize core KPIs and revenue trends.
- Performed exploratory data analysis (EDA) to identify statistically significant patterns in global sales data.
- Developed technical visualizations designed to bridge the gap between raw data structures and executive-level business intelligence.

Data Science Intern – British Airways – Virtual

- Developed a web scraping pipeline using Python to extract and preprocess unstructured customer review data from third-party platforms.
- Performed Sentiment Analysis using the NLTK/VADER library to quantify customer satisfaction and identify recurring service pain points.
- Engineered a predictive classification model (Random Forest/XGBoost) to forecast customer booking behavior with high accuracy.
- Utilized Mutual Information (MI) scores for feature selection to optimize model performance and identify key drivers of ticket conversions.

SKILLS

- Machine Learning
- Deep Learning
- Large Language Models (LLMs)
- Natural Language Processing (NLP)
- Computer Vision
- Reinforcement Learning
- Generative AI
- Prompt Engineering
- Retrieval-Augmented Generation (RAG)
- AI Agents
- Model Fine-Tuning
- Data Analysis
- Data Visualization
- Feature Engineering
- Model Evaluation
- MLOps
- AI Model Deployment
- Python
- TensorFlow / Keras
- Scikit-learn
- Pandas
- NumPy
- API Integration
- REST APIs
- NASA POWER API
- Streamlit
- Git / GitHub
- SQL
- Data Preprocessing
- Statistical Analysis
- Research & Experimentation

CREDENTIALS

- **Google** Certified AI Prompt Specialist
- **IBM** Certified LLM Fine-Tuner
- **Google** Certified AI Business Intelligence Specialist
- **Hugging Face** Certified LLM Fundamentalist

EXTERNAL FIELD EXPERIENCE

- Provided customer support for internet services of Rogers Communications, Bell Canada, Koodo Mobile, and Telus.
- Assisted customers in selecting plans, activating services, and resolving connectivity issues.
